

AI Red Flag Detector Report

Job Posting Analysis: Software Engineering Intern — Microsoft

Overall Risk Score

18 / 100

(Low Risk)

Top Red Flags

Missing stipend/salary information — Severity: 4/10

No compensation details listed, which is common for internships but still worth confirming upfront.

No mention of internship duration — Severity: 3/10

Unclear if this is a summer internship (2-3 months) or a longer program.

Vague “cloud-based solutions” responsibility — Severity: 2/10

Slightly generic phrasing; not concerning on its own but worth clarifying scope.

No mention of team size or mentor structure — Severity: 2/10

Despite “strong mentorship” being listed as a pro, the JD itself doesn't specify who you'd report to.

Multiple location options without assignment process — Severity: 3/10

Hyderabad, Bengaluru, or Noida — unclear how location is decided.

No signs of hustle-culture language, unrealistic experience demands, or fake remote claims were found — this is an on-site/hybrid role for a real, established employer.

Positive Signals

- Well-known, financially stable company (Microsoft) — low company risk.
- Clearly separated “Required” vs “Preferred” skills — realistic expectations for a student/intern.
- Reasonable qualification bar (B.Tech/B.E., graduation 2027+) — appropriate for an internship, not inflated.
- No buzzwords like “rockstar,” “ninja,” “wear many hats,” or “fast-paced hustle.”
- Transparent locations (no bait-and-switch remote claims).
- Company reputation for structured internship programs (well-documented externally).

Risk Breakdown

Category	Risk Level
Requirements	Low
Culture	Low
Remote	N/A (On-site, not advertised as remote)
Hiring	Low-Medium
Company	Low

Final Verdict

This posting shows no significant red flags. Standard due diligence is still recommended, especially around compensation and role clarity, but there's nothing here suggesting exploitation, misrepresentation, or instability.

5 Smart Interview Questions

1. Could you clarify the stipend/compensation structure and whether it varies by location (Hyderabad/Bengaluru/Noida)?
2. What is the duration of this internship, and is there a possibility of conversion to a full-time offer?
3. Who would I be working under, and what does the mentorship structure look like during the internship?
4. How is the location assigned — is it based on candidate preference, team availability, or business need?
5. Can you walk me through a typical week — how much time is spent on actual feature development vs. meetings/training?
